QUARTERLY RETURN

OF THE

MARRIAGES, BIRTHS AND DEATHS

REGISTERED

DURING THE MARCH QUARTER, 1942.

WITH

*The Number of Cases of certain Infectious Diseases notified, Vaccinations,
Ec., Ec., Ec.,*

By Authority of the Registrar-General.

To be purchased directly from the
GOVERNMENT PUBLICATIONS SALE OFFICE, 3/4 COLLEGE STREET, DUBLIN
or through any Bookseller.

Price Sixpence Net.

NOTE.—The figures in this report must be regarded as provisional. Deaths have been assigned so far as possible to the area of residence, and those of non-residents of Eire have been excluded.

MARCH QUARTER, 1942.**MARRIAGES.**

The marriages registered during the quarter numbered 4,007, equivalent to an annual rate of 5·4 per 1,000 of the estimated population; this rate is 0·6 above that for the corresponding quarter of 1941.

Of the total marriages, 3,855 (or 5·5 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (152) is equivalent to 3·1 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 14,365, of which 7,463 were of males and 6,902 of females.

The number represents a rate of 19·2 per 1,000 of the estimated population, being 0·9 above the rate for the first quarter of 1941.

The total includes 538 illegitimate births, equivalent to 3·7 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 12,103; of this number 6,309 were of males, and 5,794 of females.

The equivalent annual rate was 16·2 per 1,000 of the estimated population, being 3·4 below the rate for the first quarter of the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, small pox, measles, typhus and diarrhoea and enteritis (under 2 years)—represented an annual rate of 0·4 per 1,000, which was 0·1 above that for the first quarter of 1941.

When compared with the corresponding quarter of last year deaths from these diseases show increases in the case of typhoid fever, scarlet fever, diphtheria, measles, typhus, and diarrhoea and enteritis (under 2 years) amounting to 5, 5, 36, 4, 2, and 61 respectively. On the other hand deaths from whooping cough have decreased by 7, and dysentery by one.

The deaths from diarrhoea and enteritis (under 2 years) numbered 165, including 65 for the City of Dublin.

Influenza.—The number of deaths from influenza was 135, which is 733 less than that for the first quarter of 1941.

Tuberculous Disease.—Deaths from this disease numbered 1,128, including 904 from pulmonary tuberculosis and 224 from other forms of tuberculous disease. The figures for the first quarter of 1941 were 1,028, 822 and 206 respectively. The rate from all forms of this disease was 1·5 per 1,000, that for pulmonary tuberculosis being 1·2 and all other forms 0·3; the respective rates for the first quarter of the preceding year were 1·4, 1·1 and 0·3.

Cancer.—Deaths from cancer numbered 944, being equivalent to a rate of 1·3 per 1,000 of the population; in the corresponding quarter of 1941 the number was 962 and the rate 1·3.

Puerperal Causes.—Deaths from these causes were represented by a rate of 2·6 per 1,000 births registered, comprising 0·7 for puerperal infection, and 1·9 for other puerperal causes, as compared with 2·9, 0·8 and 2·1 for the first quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 80 and that for the March quarter of 1941 was 83.

Population.—It is estimated that at the middle of the year 1942 the population was 2,986,000 (1,510,000 males and 1,476,000 females). This estimate, based on the population according to the Register of Population, 1941, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is subject to revision in subsequent issues of this return and in the Annual Report of the Registrar-General.

Table I.—MARRIAGES, BIRTHS and DEATHS registered in the years 1937 to 1942, by Quarters.

* Typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles, typhus, and diarrhoea and enteritis (under 2 years).

† The rates for Éire are calculated on the estimated population at the middle of 1942 and those for the other areas on the population according to the Register of Population, 1941.

‡ The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table IV., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

(a) According to the Census of 1936, but in the case of the Cities of Dublin, Cork, Limerick and Waterford the populations given are those according to the Register of Population, 1941.

(b) The population for the Borough of Dun Laoghaire is estimated to the middle of 1941.

(c) The number of births in this Table is partially corrected according to the residence of the mother. The number of births in Table VI is the total registered in the respective areas.

(c) Typhoid fever.

Table V.—Deaths registered for the City of Dublin and the County Borough of Cork by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the principal epidemic diseases during the March Quarter, 1942.

JUNE QUARTER, 1942.**MARRIAGES.**

The marriages registered during the quarter numbered 4,616, equivalent to an annual rate of 6·2 per 1,000 of the estimated population; this rate is 1·2 above that for the corresponding quarter of 1941.

Of the total marriages, 4,325 (or 6·3 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (291) is equivalent to 6·0 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 18,177, of which 9,267 were of males and 8,910 of females.

The number represents a rate of 24·5 per 1,000 of the estimated population, being 4·5 above the rate for the second quarter of 1941.

The total includes 648 illegitimate births, equivalent to 3·6 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 10,811; of this number 5,667 were of males, and 5,144 of females.

The equivalent annual rate was 14·6 per 1,000 of the estimated population, being 0·5 below the rate for the second quarter of the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, small pox, measles, typhus and diarrhoea and enteritis (under 2 years)—represented an annual rate of 0·5 per 1,000, which was 0·1 above that for the second quarter of 1941.

When compared with the corresponding quarter of last year the deaths from these diseases show an increase in the case of typhoid fever of 9, scarlet fever of 7, whooping cough of 35, diphtheria of 22, measles of 5 and diarrhoea and enteritis of 36. On the other hand deaths from typhus have decreased by 3.

The deaths from diarrhoea and enteritis (under 2 years) numbered 171, including 65 for the City of Dublin.

Influenza.—The number of deaths from influenza was 132, which is 186 less than that for the second quarter of 1941.

Tuberculous Disease.—Deaths from this disease numbered 1,269, including 1,011 from pulmonary tuberculosis and 258 from other forms of tuberculous disease. The figures for the second quarter of 1941 were 980, 738 and 242 respectively. The rate for all forms of this disease was 1·7 per 1,000, that for pulmonary tuberculosis being 1·4 and all other forms 0·3; the respective rates for the second quarter of the preceding year were 1·3, 1·0 and 0·3.

Cancer.—Deaths from cancer numbered 964, being equivalent to a rate of 1·3 per 1,000 of the population; in the corresponding quarter of 1941 the number was 874 and the rate 1·2.

Puerperal Causes.—Deaths from these causes were represented by a rate of 2·2 per 1,000 births registered, comprising 0·3 for puerperal infection, and 1·9 for other puerperal causes, as compared with 2·0, 0·4 and 1·6 for the second quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 62 and that for the June quarter of 1941 was 71.

Population.—It is estimated that at the middle of the year 1942 the population was 2,963,000 (1,499,000 males and 1,464,000 females). This estimate, based on the population according to the Register of Population, 1941, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is subject to revision in subsequent issues of this return and in the Annual Report of the Registrar-General.

Table I.—MARRIAGES, BIRTHS and DEATHS registered in the years 1937 to 1942, by Quarters.

* Typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles, typhus and diarrhoea and enteritis (under 2 years).

† The rates for Éire are calculated on the estimated population at the middle of 1942 and those for the other areas on the population according to the Register of Population, 1941.

‡ The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table IV., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

(a) According to the Census of 1936, but in the case of the Cities of Dublin, Cork, Limerick and Waterford the populations given are those according to the Register of Population, 1941.

The population for the Borough of Dun Laoghaire is estimated to the middle of 1941.

(b) The number of births in this Table is partially corrected according to the residence of the mother. The number of births in Table VI is the total registered in the respective areas.

(c) Typhoid fever.

Table V.—Deaths registered for the City of Dublin and the County Borough of Cork by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the principal epidemic diseases during the June Quarter, 1942.

SEPTEMBER QUARTER, 1942.**MARRIAGES.**

The marriages registered during the quarter numbered 5,041, equivalent to an annual rate of 6·8 per 1,000 of the estimated population; this rate is 1·2 above that for the corresponding quarter of 1941.

Of the total marriages, 4,702 (or 6·8 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (339) is equivalent to 6·9 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 17,735, of which 9,127 were of males and 8,608 of females.

The number represents a rate of 23·9 per 1,000 of the estimated population, being 3·8 above the rate for the third quarter of 1941.

The total includes 675 illegitimate births, equivalent to 3·8 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 8,524; of this number 4,506 were of males, and 4,018 of females.

The equivalent annual rate was 11·5 per 1,000 of the estimated population, being 0·1 below the rate for the third quarter of the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles, typhus and diarrhoea and enteritis (under 2 years)—represented an annual rate of 0·6 per 1,000, which was the same as the rate for the third quarter of 1941.

When compared with the corresponding quarter of last year the deaths from these diseases show an increase in the case of typhoid fever of 7, scarlet fever of one, whooping cough of 7, and diphtheria of 20. On the other hand deaths from measles have decreased by 12, and diarrhoea and enteritis (under 2 years) by 14.

The deaths from diarrhoea and enteritis (under 2 years) numbered 303, including 144 for the City of Dublin.

Influenza.—The number of deaths from influenza was 37, which is 32 less than that for the third quarter of 1941.

Tuberculous Disease.—Deaths from this disease numbered 958, including 804 from pulmonary tuberculosis and 154 from other forms of tuberculous disease. The figures for the third quarter of 1941 were 832, 643 and 189 respectively. The rate for all forms of this disease was 1·3 per 1,000, that for pulmonary tuberculosis being 1·1 and all other forms 0·2; the respective rates for the third quarter of the preceding year were 1·1, 0·9 and 0·2.

Cancer.—Deaths from cancer numbered 937, being equivalent to a rate of 1·3 per 1,000 of the population; in the corresponding quarter of 1941 the number was 879 and the rate 1·2.

Puerperal Causes.—Deaths from these causes were represented by a rate of 1·8 per 1,000 births registered, comprising 0·3 for puerperal infection, and 1·5 for other puerperal causes, as compared with 2·7, 0·8 and 1·9 for the third quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 57 and that for the September quarter of 1941 was 64.

Population.—It is estimated that at the middle of the year 1942 the population was 2,963,000 (1,499,000 males and 1,464,000 females). This estimate, based on the population according to the Register of Population, 1941, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is subject to revision in subsequent issues of this return and in the Annual Report of the Registrar-General.

Table I.—MARRIAGES, BIRTHS and DEATHS registered in the years 1937 to 1942, by Quarters.

YEAR AND QUARTER		NUMBERS				RATES

(a) According to the Census of 1936, but in the case of the Cities of Dublin, Cork, Limerick and Waterford the populations given are those according to the Register of Population, 1941. The population for the Borough of Dun Laoghaire is estimated to the middle of 1941.

(b) The number of births in this Table is partially corrected according to the residence of the mother. The number of births in Table VI is the total registered in the respective areas.

(c) Typhoid fever.

Table V.—Deaths registered for the City of Dublin and the County Borough of Cork by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the principal epidemic diseases during the September Quarter, 1942.

DECEMBER QUARTER, 1942.**MARRIAGES.**

The marriages registered during the quarter numbered 3,792, equivalent to an annual rate of 5.1 per 1,000 of the estimated population; this rate is 0.2 above that for the corresponding quarter of 1941.

Of the total marriages, 3,622 (or 5.2 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (170) is equivalent to 3.5 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 15,695, of which 8,069 were males and 7,626 of females.

The number represents a rate of 21.2 per 1,000 of the estimated population, being 3.7 above the rate for the fourth quarter of 1941.

The total includes 510 illegitimate births, equivalent to 3.2 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 10,181; of this number 5,375 were of males, and 4,806 of females.

The equivalent annual rate was 13.7 per 1,000 of the estimated population, being 1.5 above the rate for the fourth quarter of the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles, typhus and diarrhoea and enteritis (under 2 years)—represented an annual rate of 0.7 per 1,000, which was 0.1 above that for the fourth quarter of 1941.

When compared with the corresponding quarter of last year the deaths from these diseases show an increase in the case of whooping cough of 43, diphtheria 19, and diarrhoea and enteritis (under 2 years) of 26. On the other hand deaths from typhoid fever have decreased by 2, scarlet fever by 6, and measles by 10.

The deaths from diarrhoea and enteritis (under 2 years) numbered 338, including 191 for the City of Dublin.

Influenza.—The number of deaths from influenza was 69, which is 2 more than that for the fourth quarter of 1941.

Tuberculous Disease.—Deaths from this disease numbered 920, including 745 from pulmonary tuberculosis and 175 from other forms of tuberculous disease. The figures for the fourth quarter of 1941 were 830, 653 and 177 respectively. The rate for all forms of this disease was 1.2 per 1,000, that for pulmonary tuberculosis being 1.0 and all other forms 0.2; the respective rates for the fourth quarter of the preceding year were 1.1, 0.9 and 0.2.

Cancer.—Deaths from cancer numbered 1,002, being equivalent to a rate of 1.4 per 1,000 of the population; in the corresponding quarter of 1941 the number was 942 and the rate 1.3.

Puerperal Causes.—Deaths from these causes were represented by a rate of 1.8 per 1,000 births registered, comprising 0.6 for puerperal infection, and 1.2 for other puerperal causes, as compared with 3.3, 0.5 and 2.8 for the fourth quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 78 and that for the December quarter of 1941 was 74.

Population.—It is estimated that at the middle of the year 1942 the population was 2,963,000 (1,499,000 males and 1,464,000 females). This estimate, based on the population according to the Register of Population, 1941, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is subject to revision in the Annual Report of the Registrar-General.

Table I.—MARRIAGES, BIRTHS and DEATHS registered in the years 1937 to 1942, by Quarters.

* Typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles, typhus and diarrhoea and enteritis (under 2 years).

† The rates for Eire are calculated on the estimated population at the middle of 1942 and those for the other areas on the population according to the Register of Population, 1941.

‡ The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table IV., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

Table IV.—BIRTHS and DEATHS registered for the Principal Towns during the December Quarter, 1942.

(a) According to the Census of 1936, but in the case of the Cities of Dublin, Cork, Limerick and Waterford the populations given are those according to the Register of Population, 1941. The population for the Borough of Dun Laoghaire is estimated to the middle of 1941.

(b) The number of births in this Table is partially corrected according to the residence of the mother. The number of births in Table VI is the total registered in the respective areas.

(c) Typhoid Fever.

Table V.—Deaths registered for the City of Dublin and the County Borough of Cork by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the principal epidemic diseases during the December Quarter, 1942.

[illegible]

* These rates are calculated on the population according to the Register of Population, 1941. See Table IV. (a) Typhoid Fever.

If the boundaries of these districts were altered on 1st April, 1994 ; the populations for the existing districts are not at present available.

Table VI.—MARRIAGES, BIRTHS and DEATHS Registered by Provinces and Counties, with Deaths from some of the Principal Causes ; Inquest Cases ; Deaths in Public Institutions ; Uncertified Deaths ; and the number of VACCINATIONS during the December Quarter, 1942.

YEAR, 1942

MARRIAGES.

The marriages registered during the year numbered 17,456, equivalent to an annual rate of 5.9 per 1,000 of the estimated population; this rate is 0.9 above that for the year 1941.

Of the total marriages, 16,504 (or 6.0 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (952) is equivalent to 4.9 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the year amounted to 65,972, of which 33,926 were of males and 32,046 of females.

This number represents a rate of 22.3 per 1,000 of the estimated population, being 3.3 above the rate for the year 1941.

The total includes 2,371 illegitimate births, equivalent to 3.6 per cent of the total births recorded.

DEATHS.

The number of deaths registered during the year was 41,619; of this number 21,857 were of males, and 19,762 of females.

The equivalent annual rate was 14.0 per 1,000 of the estimated population, being 0.6 below the rate for the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, typhus, smallpox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoea and enteritis (under 2 years of age)—represented an annual rate of 0.6 per 1,000, which was 0.1 above the rate for the year 1941.

When compared with the corresponding figures for last year deaths from typhoid fever, scarlet fever, whooping cough, diphtheria and diarrhoea and enteritis (under 2 years of age) show increases of 19, 7, 74, 96 and 102, respectively; on the other hand deaths from dysentery have decreased by 2, from measles by 15, and from typhus by one.

The deaths from diarrhoea and enteritis (under 2 years of age) numbered 977, including 465 for the City of Dublin.

Influenza.—The number of deaths from influenza was 373, which was 962 less than that for the year 1941.

Tuberculous Disease.—Deaths from all forms of tuberculous disease numbered 4,275, comprising 3,464 from pulmonary tuberculosis, and 811 from other forms of tuberculous disease. The corresponding figures for the year 1941 were 3,711, 2,882 and 829 respectively. The rate for deaths from all forms of this disease for 1942 was 1.4 per 1,000, the rate for pulmonary tuberculosis being 1.1, and all other forms 0.3; the respective rates for 1941 were 1.2, 0.9 and 0.3.

Cancer.—Deaths from cancer numbered 3,847, being equivalent to a rate of 1.3 per 1,000 of the population; in the year 1941 the number was 3,790, and the rate 1.3.

Puerperal Causes.—Deaths from these causes are represented by a rate of 2.1 per 1,000 births registered, comprising 0.4 for puerperal infection, and 1.7 for other puerperal causes, as compared with 3.2, 0.8 and 2.4 for 1941.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 68, that for the year 1941 being 74.

Table I.—MARRIAGES, BIRTHS and DEATHS Registered during the year 1942, by Provinces and Counties, with Deaths from some of the Principal Causes ; Inquest Cases ; Deaths in Public Institutions ; Uncertified Deaths ; and the number of VACCINATIONS.

The deaths registered during the year include

* Typhoid fever, scarlet fever, whooping cough, diphtheria, dysentery, smallpox, measles, typhus, and diarrhoea and enteritis (under 2 years of age).

† The rates for Eire are calculated on the estimated population at the middle of 1942 and those for the other areas on the population according to the Register of Population, 1941.

‡ The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table IV., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

Table 3.—BIRTHS and DEATHS registered for the Principal Towns during the year 1942.

PRINCIPAL TOWNS.	POPULATION (a)	ANNUAL RATE PER 1,000		BIRTHS (b).	DEATHS.															CAUSED BY					Inquest Cases.	In Public Institutions.	Uncertified Deaths

(a) According to the Census of 1936, but in the case of the Cities of Dublin, Cork, Limerick and Waterford, the populations given are those according to the Register of Population, 1941. The population for the Borough of Dun Laoghaire is estimated to the middle of 1941.

(b) The births in this Table are partially corrected according to the residence of the mother. The births shown in Table I are the total numbers registered in the respective areas.

(c) Typhoid Fever.

Table 4.—Deaths registered during the year 1942, for the City of Dublin and the County Borough of Cork by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the Principal Epidemic Diseases.

[illegible]

* These rates are calculated on the population according to the Register of Population, 1941. See Table 3. (a) Typhoid Fever.

† The boundaries of these districts were altered on 1st April, 1941; the populations for the existing districts are not at present available.

Table 5.—Summary of Cases of Infectious Diseases notified to the Department of Local Government and Public Health during the Year 1942.

This Summary has been prepared from the Department's Weekly Returns but adjustments have been made in respect of any corrections of these returns received after their issue.

The letters in the last column denote the following diseases:—A. Acute anterior poliomyelitis. B. Cerebro-spinal fever. C. Continued fever. D. Encephalitis lethargica. E. Erysipelas. F. Ill-defined fever. G. Membranous Croup. J. Ophthalmia neonatorum. K. Paratyphoid A. L. Paratyphoid B. M. Dysentery (Bacillary). N. Malaria. O. Undulant fever. P. Dysentery (Amoebic). Q. Pemphigus Neonatorum. R. Trachoma S. Diarrhoea and Enteritis.
